Soma (Carisoprodol) is a prescription **muscle relaxant** used to treat muscle pain, stiffness, and injuries. It works by blocking pain signals between the nerves and the brain, helping the body relax. Soma is usually prescribed for **short-term use**, often along with rest and physical therapy, to relieve discomfort from muscle strains or sprains.

How Soma Works

Soma acts on the **central nervous system**, slowing down nerve activity related to muscle tension.

This leads to:

- Relaxed muscles
- Reduced pain

- Better comfort during recovery

Because it works quickly, Soma is often used for sudden muscle pain or injury-related discomfort.
